

## HIGH TEMPERATURE WARE WASHING MACHINE LOG

- Hot water sanitization is met when 160° F is reached at the surface of the item being washed.
- The machine thermometer should read per manufacturer instructions on the data plate.
- Evaluate the temperature at least daily by using a waterproof min/max thermometer or temperature sensitive tape.
- If the temperatures are less than required, notify the person in charge (PIC) immediately.
- Document what action was taken to fix the problem.

Date	Time	Gauge Temp	Surface Temp/Sticker	Recorded By	Corrective Action	PIC Review
Example: 1/1/2019	10:00am	178° F	161° F	AB	N/A	CD
